Power BI @ Brookfield Renewable | Alteryx | Power Platform | GenAI
Portfolio (Modular Python, RAG)
Gatineau, Quebec, Canada

Summary

Dynamic and innovative Business Intelligence Analyst with 5+ years of experience bridging finance and technology to deliver impactful BI and analytics solutions. I specialize in designing and implementing Power BI dashboards, data models, and automation workflows that streamline reporting, improve efficiency, and empower data-driven decision-making.

With expertise in Power BI, Alteryx, Python, MS Fabric, and Azure Data Factory, I transform raw data into actionable insights, aligning analytics with strategic business needs. I'm passionate about simplifying complex technical concepts for stakeholders, fostering data literacy, and building scalable solutions that drive measurable impact across organizations.

I thrive in collaborative environments, where I can combine technical skills with business acumen to solve problems, optimize processes, and create BI solutions that accelerate growth and sustainability goals.

Experience

Brookfield Renewable

2 years 10 months

System Analyst, Power BI

January 2025 - Present (1 year 1 month)

Gatineau, QC

Business Analyst

April 2023 - Present (2 years 10 months)

Gatineau, Quebec, Canada

1. Building and optimizing Power BI reports to analyze and compare financial data from ERP systems such as D365 and IFS, providing month-over-month and year-to-date analysis.

2. Creating interactive dashboards for the finance and accounting teams to track performance metrics, account balances, trial balances, and financial reconciliations.

Automating financial workflows using Power Automate and Alteryx to streamline tasks such as invoice processing, reconciliation, and trial balance reporting.

3. Collaborated with stakeholders to identify opportunities for process optimization and automation. Designed and developed Power BI reports leveraging advanced DAX, virtual tables, and star schema relationships. These reports replaced manual daily/monthly reporting processes, enhancing efficiency and accuracy while maintaining strict compliance with data sensitivity and confidentiality standards.

Essex Powerlines Corporation

Data Analyst

January 2022 - April 2022 (4 months)

Windsor, Ontario, Canada

- To create an Portfolio optimization tool which enables them to automate from the complex excel workbook format to smart technological decision making process, enabling business to make smart decision about investment using Efficient Frontier technique
- To create and apply artificial intelligence algorithms to predict the next possible projects suitable at a particular period of time considering the list of strategic business objectives.
- Create end to end machine learning pipelines for running the algorithm as an API and deploying it using cloud Technologies
- Produce weekly progress reports and update the key project stakeholders.
- Project prioritization model using optimization model
- To deploy the tool in real time for real data using Virtual Machine and constantly revise it for real time data.
- To create and produce end-to-end user guides and full technical documentation for the product.

Adani Solar

Data Analyst

February 2018 - December 2020 (2 years 11 months)

Mundra

- Developed and designed documents including training manuals, process outlines, flowcharts, checklists, templates, and implementation procedures using excel, Alteryx and SQL
- Spearheaded and provided technical guidance to a team of engineers and manufacturing technicians and with a high level of efficiency and enthusiasm.
- Performed assessment of the current state, preparing road map and resource plan to improve productivity in future state, service and culture across the organization.
- Continuously reviewed and improve data gathering and analysis of data to efficiently provided input to other departments requiring production data, by performing ETL processes and fetching data from SQL database.
- Used SAP Material Movement modules to scrap the data and import in the excel by automating it with the help advanced Microsoft excel techniques, and prepared mentioning defect percentage, its causes and material waste reduction using gap analysis which eventually added financial value to the organisation
- Visualised the KPIs using power BI to display existing production processes and developed recommendations for changes to working methods.

P V Power Tech Ltd.

Business Analyst

February 2017 - February 2018 (1 year 1 month)

Mumbai, Maharashtra, India

- Coordinated and implemented quality control objectives, activities and prepared strategy to resolve production problems, maximize product reliability and minimize costs.
- Documented product-related issues, product specifications and executed document control procedures and assisted in root cause analysis.
- Conducted work measurements and established the sequence of operations to manufacture products to promote efficient utilization and arrive at work standard.
- Identified manufacturing/engineering/value chain improvements during product development projects.

P v Power technologies Ltd.

Asst Engineer

February 2017 - 2017 (less than a year)

Education

St. Clair College

PGDM, Data Analysis for business intelligence · (January 2021 - May 2022)

Sanjeevan Engineering & Technology Institute, Somwar
Peth, Panhala,

Bachelor of Engineering (B.E.), electrical engineering · (2010 - 2016)
